

Class II Correction in Class I Time

The GOLD STANDARD
in Class II Education!

Realize the full potential of Molar-To-Molar therapy and treat your Class II cases in Class I time!

An evolution in Herbst®* Class II therapy makes it possible for you to combine two distinct treatment phases by achieving skeletal and dental corrections at the same time.

Through a combination of lecture and hands-on instruction you will learn:

- How to use a molar-to-molar appliance that makes treatment simpler, faster, more efficient and more comfortable than ever before
- How to advance the mandible to a Class I occlusion within 6 to 9 months – simultaneously with orthodontic treatment
- Each step of treatment from appliance placement through activation and removal, full bracket therapy and debonding with retainer placement
- How to use hybrid molar-to-molar appliances for Brachycephalic treatment, high-angle treatment and congenitally missing bicuspid
- How to optimize treatment efficiency and results with face-driven treatment planning, precise bracket placement and proper use of variable torques

Molar-To-Molar Class II Corrector

Dischinger In-Office Course

Lake Oswego, Oregon | October 10–11, 2014

“Attending the Dischinger in-office course was great hands on training that taught me to confidently and successfully treat patients with Molar-to-Molar therapy: even very severe Class II patients.”

~ Dr. Shoff, a course attendee

Dr. Terry Dischinger

Dr. Terry Dischinger maintains an active practice in Lake Oswego, Oregon, where he has been heavily involved in early treatment with functional appliances for over 30 years. Terry has lectured extensively throughout the United States and abroad, with numerous articles published in national orthodontic journals, including Clinical Impressions. He is a widely recognized leader in Herbst therapy and orthodontists worldwide have attended his in-office courses to learn new techniques. Dr. Dischinger received his B.S. from Purdue University and his dental degree from the University of Tennessee. He received his graduate training at the University of Oregon Health Science Center. His career also includes an Olympic Gold Medal in basketball as well as Rookie of the Year and all-star status during his nine years in the NBA. He is a member of the Purdue Athletic Hall of Fame.

Dr. Bill Dischinger

Dr. Bill Dischinger has lectured nationally on a variety of subjects, including functional jaw orthopedics, indirect bonding and practice management from a team approach. He is one of 16 certified Damon instructors who have taught and lectured extensively on passive self-ligation with the Damon System. Bill has written several articles published in Clinical Impressions and is actively involved in national study clubs that address the latest treatment techniques. He completed his dental training at Oregon Health Sciences University in 1997 and his orthodontic residence at Tufts University in Boston in 1999. Bill grew up in Lake Oswego, Oregon, where he has practiced with his father, Dr. Terry Dischinger, since 1999. Bill and his wife, Kari Lynn, have four sons, Taylor, Turner and twins Trey and Tristan.

Agenda

Drs. Terry and Bill Dischinger will discuss diagnoses and treatment plans for incoming patients as mixed and full-dentition patients arrive in various stages of treatment. You and your staff will be invited for hands-on clinical experience with molar-to-molar appliances.

DAY ONE – Friday

8:00 a.m. – 12:00 p.m.

Lecture

- Evidence-based Herbst treatment
- Dischinger case research
- The appliance – simultaneous molar-to-molar and bracketed orthodontic treatment
- Molar-to-Molar treatment – new Class II patients, diagnosis and treatment planning
- Initial steps of treatment – fit and cement appliance, place brackets and archwires, activate appliance

Clinical (Hands-on)

- Molar-to-Molar placement with new Class II patients in mixed and permanent dentition

12:00 p.m. – 1:00 p.m. Lunch

1:00 p.m. – 5:00 p.m.

Lecture

- Final steps of treatment – from appliance removal to retention

Clinical (Hands-On)

- Final steps of treatment – tomogram x-ray remove appliance crowns, panorex, bracket molars and reposition brackets

5:30 p.m. Dinner

DAY TWO – Saturday

8:00 a.m. – 12:00 p.m.

Lecture

- Hybrid molar-to-molar appliances for Brachycephalic treatment, high-angle treatment and congenitally missing bicuspid

Clinical (Hands-on)

- Patients in all stages of treatment – with appliance in place and post-removal (wearing just brackets)
