COURSE DESCRIPTION

This two day course will present the latest open and arthroscopic advances in the diagnosis and treatment of wrist disorders. It will include the various management options for carpal instabilities, TFC tears and DRUJ instability. Arthroscopic capsulotomies, partial carpal and ulnar head resections may have a less of a deleterious effect on wrist motion as compared to open procedures by preventing the need for large capsular incisions. Thermal capsular shrinkage is an exciting new area for treatment of ulnar capsular and partial intracarpal ligamentous instabilities. Arthroscopic techniques for scaphoid nonunion fixation have become a standard of care.

The first day of the course consists of didactic presentations and faculty discussions for up to 75 participants, who will gain an understanding of the use of capsular shrinkage, ARIF and ORIF. The second day offers a one day cadaver hands-on lab for a maximum of 30 participants, featuring one-on-one instruction in the latest wrist arthroscopy repairs and open techniques.

TARGET AUDIENCE

This course is intended for orthopaedic surgeons, plastic surgeons, hand surgeons, residents and hand fellows, and other medical personnel working in the field of orthopedics, as well as all allied health professionals who care for adults and seek to enhance their understanding of orthopaedics and treatment options to optimize management of their patients.

COURSE OBJECTIVES

At the conclusion of the program the participant should be able to:

- Examine the role of thermal shrinkage in carpal instability.
- Discuss the indications for partial carpal resection.
- Identify the indications and contraindications for arthroscopic-aided reduction and internal fixation of distal radius fractures.
- Assess the salvage options for nonreconstructible scaphoid nonunions.
- Discuss the options for vascularized scaphoid bone grafts.
- Recognize the indications and contraindications for arthroscopic-aided reduction and internal fixation of scaphoid nonunions.
- Outline the indications for percutaneous scaphoid fixation.
- Distinguish the scaphoid anthropometry and blood supply.
