Optimizing Quality in Colonoscopy: Techniques and Technologies to Improve Detection and Therapy

Friday and Saturday, March 18-19, 2016

Course Description

This course features a faculty of globally recognized educators and experts in the area of colonoscopy who will help participants improve their colonoscopy performance. Through didactic presentations, video demonstrations and practical hands-on training sessions at the state-of-the-art ASGE Institute for Training and Technology, participants will learn how to achieve safer, higher-quality and more efficient colonoscopies, which includes advancing their skills in cecal intubation, mucosal inspection, adenoma detection, use of chromoendoscopy, polypectomy, mucosal defect closure, control of bleeding, as well as the prevention and management of adverse events.

Learning Objectives

Upon completion of this educational activity, participants will be able to:

- Utilize safe and effective bowel preparations and medication management for a spectrum of patient conditions and co-morbidities.
- Implement quality measures for colonoscopy and use these benchmarks to enhance colonoscopy practice.
- Adapt their practice to meet performance-based payment requirements.
- Increase their adenoma detection rates through the use of optimal withdrawal techniques, image-enhancement, chromoendoscopy, caps and evolving scope technologies.
- Resect large, flat adenomas safely and completely, using a variety of tools and techniques including submucosal injection, endoloops, as well as piecemeal and en bloc mucosal resection.
- Reduce post-polypectomy complication by implementing safer techniques and interventions.

“*Fabulous course!*”

Intended Audience

Practicing gastrointestinal endoscopists, surgeons and clinical members of endoscopy teams who perform colonoscopy.
