

ISMRM Workshop on: Diffusion-weighted Imaging Outside the Brain: From Physics to Clinical Practice

Boston, MA, USA • 01–04 April 2015

TARGET AUDIENCE: The workshop is designed for clinical radiologists, basic MR scientists and MR physicists, students, postdocs, members of the Diffusion Study Group and MR technicians.

COMMITTEE CHAIRS:

Co-Chairs:

Dow-Mu Koh, M.D., MRCP, FRCR
Royal Marsden Hospital
Sutton, UK

Bachir Taouli, M.D.
Icahn School of Medicine at
Mount Sinai
New York, NY, USA

OVERVIEW

Extra-cranial DWI is increasingly used in clinical practice and research, and this workshop would be timely, drawing on the rich expertise within the Society, to educate, discuss and consolidate the current role of DWI for clinical utility and research.

The workshop program will cover the latest advances in the application of DWI outside the brain and will feature invited scientific presentations, a poster session and round table debates.

The meeting also provides a unique opportunity leading to writing of a consensus document to be submitted for potential publication in the Journal of Magnetic Resonance Imaging based on the discussions and recommendations of the experts present at the conference.

EDUCATIONAL OBJECTIVES

Upon completion of this workshop, participants should be able to:

- Describe current diffusion protocols applied to disease evaluation outside the brain
- Review the role of DWI in the body in clinical practice; and
- Discuss how DWI may impact treatment decisions in oncology.
