Join Your Colleagues in Las Vegas for ACG 2016

The Premier GI Clinical Event of the Year!

Dear Colleagues,

It is my great pleasure to invite you to ACG 2016, ACG's Annual Scientific Meeting and Postgraduate Course, the premier GI clinical event of the year. This year's meeting will be held in Las Vegas, Nevada at The Venetian. The faculty includes internationally known experts and rising stars in the fields of gastroenterology and hepatology, delivering the latest clinical updates on common and not-so-common GI disorders, as well as what is on the horizon that may impact your practice. Get the answers you seek, exchange ideas with fellow colleagues, learn the latest clinical updates, and gain insight from the experts at ACG 2016.

Developed by clinical gastroenterologists for gastroenterologists and their non-physician colleagues, ACG 2016 is designed to meet your needs and cover the topics of most importance to you. The educational program is designed with the busy GI clinician in mind. You can customize your schedule to attend one day for one or more of the special Friday courses, two days for the Postgraduate Course, three days for the Annual Scientific Meeting, or a combination of the three. Unlike other unwieldy meetings, at ACG 2016, you won't find dozens of sessions taking place at the same time, so you won't miss any topics of interest to you.

At ACG 2016 you will find:

- Numerous educational sessions that will provide ways to enhance patient care and improve efficiency in your practice
- Both CME credits and MOC points available for all of the Friday Courses, the Postgraduate Course, and the Annual Scientific Meeting
- Cutting-edge research presented by colleagues from the U.S. and abroad
- Networking events to connect with old colleagues and make new contacts
- An exhibit hall showcasing the latest advances in technology and therapeutics

ACG's popular Hands-on Workshop Center is back for a seventh year. Located in the Exhibit Hall, leading experts will demonstrate the latest tools and techniques using the most advanced devices and equipment. Pre-registration for the hands-on sessions will take place onsite in Las Vegas. The Hands-on Workshop Center will be open beginning Sunday, October 16th. See page 12 for more information.

The ACG Annual Scientific Meeting is the ONLY major GI meeting that is still offered as a member benefit at no extra charge. ACG members also receive discounted registration rates for the Postgraduate Course and Friday courses. One reason the College can continue to offer this as a member benefit is the participation of exhibitors at the meeting. Exhibitor participation in the Exhibit Hall, as well as exhibitor sponsorship and promotion, helps to offset costs for the meeting, and without their support, the meeting in its current form would not be possible. Their participation also allows you the opportunity to learn the latest information about their products without disrupting your busy work schedule. I encourage every attendee to visit the Exhibit Hall while at ACG 2016, take advantage of all that you can see and learn, and express your appreciation to exhibitors for their participation at the meeting.

The Exhibit Hall Opening Reception will be held on Sunday, October 16th, immediately following the Postgraduate Course. This change provides an opportunity for PG Course registrants to mix and mingle with colleagues while browsing the Hall and viewing the posters being presented.

I hope you will join me in Las Vegas, October 14th through the 19th. Take some time away from the office to be re-energized about your profession and reconnect with colleagues. Registration and housing for ACG 2016 are now open; see page 4 for registration information, and page 6 for housing details. Learn more about what to do while in Las Vegas on page 7.

Sincerely,

Kenneth R. DeVault, MD, FACG
ACG President

GI FELLOWS & TRAINEES EVENTS

Events for GI Fellows and Trainees

The American College of Gastroenterology is committed to serving the specific needs of GI trainees. The ACG 2016 Annual Scientific Meeting and Postgraduate Course include elements designed with this aim in mind. The College assists trainees as they prepare for their future in gastroenterology through special GI trainee-focused offerings at ACG 2016, such as the Trainees Luncheon, Career Opportunities for Women in GI Luncheon, and the Navigating, Networking, and Negotiating Your First Job Workshop, which features discussions from gastroenterologists who work in a variety of practice settings. Clinical gastroenterology continues to experience an ever-increasing array of options and advancements affecting both the diagnosis and treatment of gastrointestinal (GI) disorders. Gastroenterologists must stay abreast of the diagnostic and treatment options that are available for managing their patients and effectively utilize them while maximizing quality and safety.

The multi-faceted pressures of new and increasing scientific developments, pressures from payors and policymakers, and demands by more knowledgeable patients mandate that gastroenterologists find ways to constantly reevaluate the diagnostic techniques and treatment modalities used and mechanisms for delivery in their practices. Declining reimbursement, increased demand for measurement of quality, and an insufficient workforce also remain significant challenges for gastroenterologists and their practices. As a consequence, it is important to identify more efficient ways to obtain the latest scientific knowledge and institute scientifically sound therapy so that the highest quality of patient care can be maintained. This objective, regardless of the specific practice setting, is to guarantee that each individual patient obtains the treatment and service that is the best possible option for their specific needs.

The emphasis of ACG's educational efforts focuses on these advancements in diagnosis and treatment options, as well as on the policies, procedures, and guidelines gastroenterologists employ in the overall management of their practices. A primary CME educational program goal is to heighten the knowledge of clinicians and other health care professionals involved in GI patient care in all areas of management, with an emphasis on those conditions with increasing prevalence and those where management continues to present a challenge. Attention is also placed on advanced and improved endoscopic techniques and practice management tools that can increase gastroenterologists' efficiency and effectiveness in their daily practice.

Colon Cancer Screening

Colorectal cancer is the third most commonly diagnosed cancer among both men and women. Colon cancer incidence rates have declined over the last two decades and survival rates have increased. This likely relates at least in part to increased colorectal cancer screening and surveillance, which allows physicians to detect and remove pre-cancerous polyps or diagnose cancers at an early stage. Although these trends are moving in a positive direction, there remains a need to increase the number of individuals being screened.

The proper and timely use of existing as well as newer screening tests that may lead to prevention or early diagnosis of specific disease conditions is critical. Increasing the rate of patient participation in colorectal cancer screening and surveillance is also important. Furthermore, providing and quantifying indicators that define a quality colonoscopy, including bowel preparation quality and adenoma detection rates, especially in light of recent findings on the prevalence of flat lesions, is a need that affects gastroenterologists. In addition, it is important that gastroenterologists understand the importance of grading bowel preparation using a validated scale, and that they are familiar with recommendations for the timing of a repeat colonoscopy in exams with inadequate bowel preparation.

There is also a need to recognize the potential role that the gastroenterologist plays in minimizing the occurrence of interval cancers. This includes the use of split-dose preparation in their practice as well as the use of proper polyp resection technique. The serrated pathway, which may account for at least 15% of all colorectal cancers, requires gastroenterologists to understand the challenges in detection, resection, and pathological interpretation and classification of these lesions. To aid in surveillance of serrated polyps, gastroenterologists should be aware of an expert panel's recent recommendations: Guidelines for Colonoscopy Surveillance After Screening and Polypectomy: A Consensus Update by the US Multi-Society Task Force on Colorectal Cancer. There has also been a recent update to the surveillance guidelines that includes the addition of recommendations for certain serrated polyps.

There is also a need to educate the gastroenterologist on the recent

published data that help support recommendations of previous versions of surveillance guidelines. This will hopefully serve to increase physician adherence to the guidelines. As the survival rates from these GI cancers continue to improve, the must continue educating gastroenterologists who provide ongoing care to these patients. This important and evolving educational need must be met in a way that touches on the impact of various forms of cancer on the overall health and quality of life of these patients.

Obesity

Obesity has drastically increased in prevalence in the United States, from less than 15% in the 1960s to over 30% at present. It has been predicted that if the rates continue at their current pace, by 2015, 75% of adults will be overweight or obese. Therefore, not only is it imperative for gastroenterologists to be knowledgeable regarding obesity prevention and treatment options, but it is also important that they understand the importance of patient education. Patient education is a necessity to improve compliance and to achieve desired treatment results. In those patients who undergo surgery for the management of obesity, information on the post-surgical complications has become increasingly important. Specifically, endoscopic techniques and management options in these patients can be a challenge. It is essential that gastroenterologists be familiar and up-to-date on endoscopic techniques in this challenging group of patients. These topics, as well as the latest information on what GI conditions are linked to or exacerbated by obesity, have been requested as areas of further education by practicing gastroenterologists.

IBD

Inflammatory bowel disease is an area of gastroenterology that continues to see important developments in diagnostic and medical therapeutic options. The gastroenterologist must be fully aware of the latest developments in biologic and immunomodulator therapies including safety considerations and their place in patient management. In recent years there have also been many advances made in laboratory, radiographic, and endoscopic modalities that directly impact the diagnosis and management of inflammatory bowel disease and in the surveillance for dysplasia in ulcerative colitis and Crohn's colitis. Education regarding optimizing the use of such modalities is important to the practicing gastroenterologist. The post-surgical management of inflammatory bowel disease patients also continues to be a topic of great importance and one in which the clinician often faces challenges due to the complexity and unpredictability of the condition and the associated decision-making process.

Hepatology

Gastroenterologists are frequently faced with challenges related to liver disorders including hepatitis B and C, NAFLD, hepatic encephalopathy, cirrhosis, and autoimmune liver diseases. Often, the gastroenterologist relies on the expertise of the hepatologist to assist in the management of these patients; however, with hepatologists operating at capacity, the gastroenterologist must be able to offer the best quality of care and treatment options to patients with liver disease. With the increased incidence of NAFLD, practical and clinically relevant physician education is extremely important in this area.

Hepatitis C

Hepatitis C will be the most dramatically changing area of liver disease over the next few years, and there will be two major areas that will require focus and attention. First, HCV screening recommendations have shifted from the classic risk-based screening to an age-based screening. The CDC and USPFTS have recommended one-time screening of all persons born between 1945 and 1965. It will be essential that ACG and gastroenterologists educate primary care providers as well as patients about the need for HCV screening. Secondly, there has been a dramatic shift in the treatment of hepatitis C. Compared to the previous treatments, the current treatment regimens are dramatically more effective and have shorter lengths of therapy, and have dramatically fewer

NEEDS ASSESSMENT

ACG 2016 EDUCATIONAL PROGRAMS

adverse side effects. Also, within the next 1-2 years, therapy will likely be completely all-oral, interferon-free, and perhaps even ribavirin-free. There will be a series of new regimens available, with new ones being introduced at a very rapid pace. Because there will be simple and effective therapies available, there will likely be more gastroenterologists who are willing to treat HCV. For this reason, ACG must work to educate gastroenterologists about the current and upcoming treatments. Also, with the expected rapid development and approval of multiple regimens, ACG must work to have a mechanism in place to allow rapid changes and/or addendums to HCV treatment guidelines.

Pancreaticobiliary

Pancreaticobiliary diseases can also be extremely challenging to manage, and can vary greatly in complexity and severity. Gastroenterologists play an essential role in both the evaluation and the management of patients with pancreaticobiliary disorders. Cystic neoplasms of the pancreas are more frequently diagnosed and management guidelines have been updated recently as our knowledge base continues to grow. Gastroenterologists offer highly specialized care for such patients, including advanced interventional endoscopic procedures. As endoscopic technology advances, patients are simultaneously becoming more complex, making it essential that gastroenterologists are up-to-date on these management techniques and strategies. Education on the diagnosis and management of various forms of pancreaticobiliary disease including pancreatitis, pancreatic cysts, pancreatic cancer, and biliary disorders is critical to obtaining the best patient outcomes.

Functional GI

Improvements in the understanding of the pathogenesis and treatment of motility and functional GI disorders continue to progress as research in this area expands. These disorders are among the most common GI disorders in the general population. Understanding the latest science with regard to these disorders and newer treatment modalities is critical to improving clinical outcomes and quality of life for a large group of patients who have been among the most difficult to treat. Understanding the potential role of enteric microbiota and inflammation in these disorders will also help determine the appropriate course of action and play a critical role in managing these challenging conditions.

Diarrheal disorders can prove to be challenging to diagnose and manage. Whether it be acute or chronic, caused by a malabsorptive condition, inflammatory, or infectious process, gastroenterologists must be aware of the various potential causes of diarrhea and the most appropriate corresponding treatment options. With the incidence and severity of *Clostridium difficile* infections increasing in recent years, this is yet another condition that demands close attention by the gastroenterologist.

GI Bleeding

GI bleeding remains one of the most common yet most challenging issues confronted by the clinical gastroenterologist. New anticoagulants have been released in the last several years, and this new class of drugs has made patients with GI bleeding even more difficult to treat. It is critical that gastroenterologists are frequently updated on these new medications as these patients may require different management strategies than those who are on traditional anticoagulants. Whether the GI bleeding is related to drug therapy, stress ulceration in the intensive care unit, anticoagulation, chronic liver disease, or obscure gastrointestinal bleeding, the gastroenterologist must be up to date on the latest information on strategies to prevent, diagnose, and optimally treat GI bleeding.

GERD

Gastroesophageal reflux disease is a common condition world-wide and affects 20% of American adults on a weekly basis. An understanding of its pathophysiology, diagnosis, treatment options, and complications is extremely important for the practicing gastroenterologist, and new guidelines have been published on reflux within the past year. While less common, eosinophilic esophagitis appears to be increasing markedly

in incidence and has been the subject of intense research leading to recent clinical guidelines. Esophageal dysmotility remains an ongoing challenge, and this field has dramatically changed in the past several years due to the adoption of new diagnostic modalities and an outpouring of outcomes data. This has been particularly significant for achalasia, which also has been the subject of recent consensus guidelines within the past year. Other upper GI conditions including Barrett's esophagus, dyspepsia, peptic ulcer disease, and *H. pylori* also require a clear understanding. It is important that published evidence-based practice guidelines for these upper GI conditions and many other identified GI disorders be available to the gastroenterologist for their explicit understanding and to enhance their ability to most effectively manage each of their patients. With guidelines published on gastroesophageal reflux disease, eosinophilic esophagitis, and achalasia within the last year, this has been an active area and this new information needs to be disseminated to the gastroenterology community.

Endoscopy

Rapid technological advancements in endoscopy and other diagnostic and therapeutic areas in gastroenterology creates a need to communicate the latest techniques and strategies for managing everything from patients with altered anatomy to identification and removal of large and difficult polyps to developing practice of natural orifice transluminal endoscopic surgery. Gastroenterologists in a variety of practice settings need to learn and integrate these new therapies into their practice in order to provide state-of-the-art services to their patients.

Quality

Finally, it is critical that gastroenterologists incorporate quality, safety, and service metrics into their clinical practice. In particular, quality and safety issues in the endoscopy suite need to be addressed in order to improve patient outcomes. Other quality issues dealing with specific disease states and their management in the office practice also need to be addressed by the practicing gastroenterologist. Practice efficiency is also of great importance as the demand for increased efficiency across all settings continues to drive the search for practical tools to positively impact care delivery and patient outcomes. Through the use of evidence-based approaches for treatment and rational public health policy, clinicians need to identify new and innovative ways to deliver care across the community. Ever-expanding access to information on a real-time basis by both clinicians and patients provides unique opportunities as well as challenges to the healthcare delivery system. When this is combined with the pressures associated with increased spending on healthcare in an environment currently trending toward decreased reimbursement and inadequate rewards for the physician who spends more time with the patient, the importance of high-quality continuing medical education for gastroenterologists and their patients cannot be overstated.

Program Description

With the need to remain abreast of the many new and emerging advancements in the field of gastroenterology and the volume of patients continuing to increase as the population ages, the clinical gastroenterologist is more challenged than ever to deliver the best patient care in each situation they encounter. Research in a multitude of gastroenterology and hepatology areas progresses at a rapid pace. Advances in technology, diagnostic modalities, and therapeutic options have had a positive impact on the management of many GI diseases. Scientific education, based on critical foundational knowledge and clinical skills, the communication of practical methods for treatment, and the ability to integrate the newest tools in diagnosis with the latest therapeutic/treatment options, are key necessities for the GI clinician to deliver top-quality patient care. This course will provide updates on a variety of gastroenterology and hepatology subjects including colon, IBD, small bowel and functional disorders, endoscopic emergencies, quality metrics in GI, obesity, pancreaticobiliary, liver disease, esophagus and stomach, liver disease, and motility. Expert faculty will deliver scientific presentations in a variety of formats. Didactic lectures, followed by interactive question and answer sessions, small group learning luncheons, and a choice of simultaneous sessions on the latest topics in GI and liver clinical care will be offered.

The program is designed primarily for clinicians in GI/hepatology, as well as physician assistants, nurse practitioners, and other advanced practice healthcare professionals interested in a scientifically sound approach to the management of GI and liver illnesses.

Program Description

The field of gastroenterology and hepatology continues to see advancements in areas relating to diagnostic measures, therapeutic options, and technology. To provide appropriate and top-quality patient care, the clinician is challenged to stay abreast of the changes and advancements affecting the management of many gastrointestinal and liver disease states. Throughout the three-day Annual Meeting, you will be exposed to updates in a variety of topics, including hepatitis C, quality colonoscopy practices, IBD therapies and management, IBS treatment, PPIs, hepatology, NAFLD and NASH treatment, GERD, and more.

Twelve scientific symposia and over 65 oral abstract presentations will allow attendees to hear lecture presentations from experts and to participate in interactive question and answer sessions with the faculty.

In addition, 16 optional scientific breakfast sessions will be offered, where a smaller setting allows for heightened interaction with the speakers and greater audience involvement.

Finally, ACG's 4th Annual Endoscopy Video Forum will feature the best video presentations submitted from colleagues from across the U.S. and around the world.

The Annual Scientific Meeting program is designed primarily for physicians in gastroenterology and hepatology, as well as physician assistants, nurse practitioners, and other advanced practice healthcare professionals interested in the latest information on state-of-the-art treatment of these illnesses.
