awarded by the Royal
College of Radiologists

Course Objectives

This two day course of clinically based lectures and interactive case based discussion addressing all areas of Spinal Imaging (including Trauma) serves as a focus to facilitate problem solving in the spine, utilising the various imaging modalities and their application in a number of pathological scenarios.

A series of lectures delivered by Musculoskeletal Radiologists followed by an interactive case based session with dedicated film reading and discussion.

Target Audience

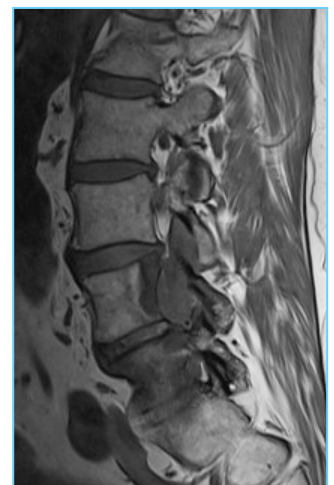

Specialist Registrars and Consultants in Radiology.

Topics Covered include

- Normal variants in spinal imaging
- Degenerative disc disease
- Spinal infection
- Non-infective inflammatory disease
- Sports and overuse injuries in the young
- Spinal cord and meninges
- The brachial plexus
- Spinal trauma
- Marrow disease
- Scoliosis
- Vertebral collapse
- Spinal stenosis
- Spinal intervention

Registration fee

£295.00 - to include lunch, refreshments and course dinner
