September 1,
2017

While we have experienced important advances in immune-based therapies for many types of diseases, the complexity of human biology and the diversity that makes each of us unique poses outstanding challenges to translate basic knowledge into effective treatments. The aim of this symposium is to bring together scientists at the forefront of this endeavour to examine and discuss a broad range of topics, from new approaches to map the human immune system to mechanisms to fight cancer and infections.

Keynote Speakers

Mark Davis, *USA*

Michel Nussenzweig, *USA*

Speakers

Galit Alter, *USA*

Dan Barouch, *USA*

Luis Barreiro, *Canada*

Yasmine Belkaid, *USA*

Marco Colonna, *USA*

Eran Elinav, *Israel*

Donna Farber, *USA*

Florent Ginhoux,

Singapore

Adrian Hayday, *UK*

Antonio Lanzavecchia,
Switzerland

Mike Lenardo, *USA*

Mihai Netea,

The Netherlands

Virginia Pascual, *USA*

Dana Pe'er, *USA*

Sergio Quezada, *UK*

Lluis Quintana-Murci,
France

Federica Sallusto,
Switzerland

Shannon Turley, *USA*

Eric Vivier, *France*

Organizers

Tak Mak, *University of Toronto, Canada*

Tania Watts, *University of Toronto, Canada*

João Monteiro, *Scientific Editor, Cell*

Fabiola Rivas, *Scientific Editor, Immunity*
