Wound Management: A Practical Guide 2017

2 Day Seminar for all Nurses, General Practitioners, Podiatrists, Pharmacists and Occupational Therapists etc.

Need for Program

Nearly half a million Australians are affected by wounds in some way. It is predicted that the prevalence and cost of wound care will rise exponentially over the next few years because of the ageing population. Many chronic wounds including **pressure injuries** are preventable. Comprehensive assessment guides treatment. Knowledge of foundation principles of wound care is essential. Additionally, new **wound dressing** products are becoming increasingly sophisticated. If best patient outcomes are to be achieved, applying evidenced wound management is essential.

Purpose of Program

The purpose of this program is to provide health professionals with up-to-date information, tools and strategies for evidenced wound care that result in best patient outcomes.

Learning Outcomes

At the conclusion of this program it is expected that the participants will be able to:

- Correlate knowledge of the aetiology of wounds and related pathophysiology with factors that impact on healing to improve patient outcomes
- Use a systematic approach for assessing a patient and their wound to guide appropriate care
- Select an appropriate management plan, including dressings, taking into account patient considerations and the pathophysiology of the wound
- Gain confidence in the management of a person with a wound and advocate for best practice care

Program Schedule

Day One

8:30am - Registration and Refreshments

9:00am

Wound Management - The Big Picture

This introductory session looks at **modern wound management** - the challenges of wounds, trends in care, best-practice resources and how this program will address these issues. Topics include:

- What is the burden of chronic wounds in today's society?
 - "The patient will see you now" - implementing patient-centred care
 - Why do best-practice resources significantly help in planning management?
 - How will these two days be structured to enhance your knowledge of wound management?
-

9:45am

The How and Why of How Wounds Heal...or Not

Refresh your knowledge on the process of **wound healing** and discover the latest information about the factors that delay or impede effective outcomes. Topics include:

- What is a wound?
 - How do wounds heal?
 - What delays or prevents healing?
-

10:30am - Morning Tea and Coffee

11:00pm

Principles of Chronic Wound Assessment

Competent **assessment** of a person with a wound is imperative for correct management. Assessment involves a range of considerations including the wound, the person and their environment. Topics include:

- How do you undertake a structured, systematic assessment?
- How do personal characteristics and the environment impact on wound healing?
- How do you document your assessment?
- How do you know if the wound will heal or not?
- What are your goals of care and how do you set them?

12:00pm

Acute and Difficult Wounds, including Skin Tears and Minor Burns

Some wounds are acute and need urgent and appropriate care to facilitate healing. This session will look briefly at a range of **acute wounds** associated with sudden **tissue disruption and damage**.

Topics include:

- Minor burns
 - Skin tears
 - Skin grafts and donor sites
 - Surgical wound management
 - Skin cancers
-

1:00pm - Lunch Break and Networking

2:00pm

Leg Ulcers - Venous, Arterial and Mixed Ulcers

Today in Australia it is estimated that 400,000 people suffer from **venous leg ulcers**. There is a strong body of evidence that describes how these ulcers should be managed, but the gap between evidence and practice is wide. This session will clarify how to identify and manage leg ulcers according to the evidence for best outcomes. Topics include:

- What causes leg ulcers?
 - What is the difference between a venous and an arterial ulcer and why is this differentiation very important?
 - What is the current best practice for leg ulcer management?
-

3:00pm - Afternoon Tea and Coffee

3:15pm

Compression Therapy for Venous Ulcers

Compression therapy is the cornerstone of venous leg ulcer management. This final session of day one will explore some key aspects of compression therapy. Includes:

- When should compression therapy be worn?
- What level of compression is required?
- What types of compression are available?
- What are the risks?

- How do you apply compression?
-

4:00pm - Close of Day One of Program

Day Two

9:00am - Commencement of Day Two

9:00am

Diabetes and High Risk Feet

Diabetes is the fastest growing condition in the world. Badly controlled diabetes leads to a raft of health problems, including foot ulcer development and poor healing. This session focuses on the effects that **neuropathies** and **peripheral arterial disease** have on the feet and why these cause so many problems once a wound develops. Topics include:

- When a person has complications of diabetes, what pathophysiological changes can be expected?
 - How does this impact on the development of a foot wound and wound healing?
 - What are the wound management implications for people with these foot wounds?
 - What is the role of inter-professional management?
-

9:45am

Pressure Injuries - Meeting Standards of Care

The National Safety and Quality Health Service Standards (NSQHS) Standard 8 'Preventing and Managing Pressure Injuries' requires: *"Clinicians and other members of the workforce use the **pressure injury prevention and management** systems."* (ACSQHC 2012)

This session will provide the relevant knowledge and identify resources to assist practitioners to meet these standards. Topics include:

- What strategies can be used to prevent pressure injuries?
 - How do I know the stage of a pressure injury?
 - What is the management of a pressure injury?
-

10:30am - Morning Tea and Coffee

11:00am

Wound Bed Preparation

There is a global approach to the local management of a wound called the 'TIME' principles. These principles are helpful in giving a structured guide to the assessment and management of a wound, known as '**Wound Bed Preparation**'. This session will examine the 'TIME' principles in some detail.

Session One: **Tissue management - cleaning and debridement**

- How can you tell if wound tissue is healthy?
- What role does cleaning and debridement have in wound healing?

Session Two: **Inflammation and infection**

- What impact do inflammation and infection have on wound healing?
- What role do antibiotics and antiseptics have?

Session Three: **Moisture management**

- What is wound exudate and what is its function?
- Why is managing wound moisture important?

Session Four: **Edge of the wound and the surrounding skin**

- What does the edge of the wound tell you about the wound?
- How does the condition of surrounding skin impact on wound healing?

1:00pm - Lunch Break and Networking

1:45pm

Dressings - Getting the Wound Environment Right

Dressings do not heal wounds. However, **dressing selection** is an important part of the overall management of the wound environment. A plethora of wound management products exists and this session will take a function-based approach on how to select the right dressing. Learn:

- How are wound dressings classified according to function?
 - How do you select the right dressing?
 - When should you modify the dressing regimen?
 - How to choose a basic range of products for your workplace
 - How do you choose a basic range of products for your workplace?
-

3:15pm - Afternoon Tea and Coffee

3:30pm

Putting It All Together

Using case scenarios this final session will give you an opportunity to relate your learning to practice. Includes:

- Consolidating the seminar program into practice
 - Taking your knowledge back to your workplace
 - Sharing your knowledge with others
-

4:00pm - Close of Seminar and Evaluations

Presenters

Greg Duncan

Greg Duncan is a pharmacist with an academic and practice background, including a strong focus on generating and using evidence. He teaches and practices in a multi-disciplinary context and is involved with pharmacy, medical and nursing education at both undergraduate and graduate levels. Greg has a special interest and expertise in evidence-based decision making in clinical settings. He developed and led programs improving the ways people use medicines both in Australia and also internationally, where he has worked on WHO projects for implementation of new global strategies for medicines' supply and use. Greg is currently employed as a Senior Research Fellow at Eastern Health Clinical School, Faculty of Medicine, Nursing and Health Sciences, Monash University.

Geoff Sussman

Geoff Sussman holds a position in the Faculty of Medicine, Nursing and Health Science at Monash University and he has been a faculty member of the summer school on wounds at St Anne's College, Oxford University. He has been involved in wound management for over 30 years in clinical research, clinical practice and teaching, and is the founder of the Wound Foundation of Australia. He was the inaugural Secretary of the World Union of Wound Healing Societies 2000-2004 and the Chairman of the Education Commission of the World Union from 2004 to 2008. He is associate editor of the International Wound Journal, a member of the editorial board of Wound Practice and Research Journal, and is a member of the advisory committee for Post Graduate Wound Care education, including Masters of Wound Care at Monash University. He was awarded an OAM in the Queen's Birthday Honours in 2006 for his work in wound care as a researcher, educator and clinician and in the sports of gymnastics and diving. He was recognised at the 2008 World Wound Healing Congress in Toronto with a lifetime achievement award for his work in wound management.
