AN INTERNATIONAL FACULTY WILL DEMONSTRATE THE RATIONAL FOR NEW CONCEPTS AND TECHNIQUES IN FACIAL REJUVENATION

The program will include:

Andre Auersvald presents the haemostatic net and its role in the elimination of haematomas in facelift surgery. Deep neck surgery techniques for the challenging heavy neck are also discussed. A new concept of browlifting is also presented.

Chiara Botti will discuss the deep subsmas approach to the face and the management of the temporal and brow region.

Niall Kirkpatrick discusses the management of the mid face and the correction of stigmatic filler deformities.

Lucian Ion presents his approach to formulating a bespoke algorithm to treat the difficult neck and the translation of 3D imaging into clinical practice.

Naresh Joshi updates the current techniques in periorbital and eyelid rejuvenation.

Norman Waterhouse discusses the evolution of the endoscopic brow lift and its successor. Potential extended applications of the haemostatic net will also be introduced. These include in addition to the face and brow, gynecomastia, rhinoplasty, body surgery and seroma prevention.

BROW FACE AND NECK. THE FUTURE!
Introducing the future of facial surgery.

From left to right:

Andre Auersvald, Norman Waterhouse, Chiara Botti, Naresh Joshi, Lucian Ion and Niall Kirkpatrick

Highlights of Day One

- Static and dynamic changes in the ageing face
- Planning for bespoke facial rejuvenation based on 3D assessments
- SMAS manipulation facelifts
- Extensive sub-SMAS surgery with a lateral approach
- Midface and temporal lifting and the treatment of the overfilled face
- The Auersvald haemostatic net in preventing haematoma
- The Auersvald haemostatic net as a facilitator for deep neck surgery and the capacity for re-draping and rejuvenation of the skin
- A new approach in surgery for the challenging neck
- Modern deep neck surgical techniques
- Skeletal management as an adjunct to facial rejuvenation
- Facelifting for gender dysphoria
- Complications and how to avoid them
- Beginning your surgical practice using the Auersvald haemostatic net

Highlights of Day Two

Periorbital and brow surgery, upper and lower blepharoplasty and surgery for the oriental eyelid.

- Pinch blepharoplasty
- Local brow lifting techniques through an eyelid approach
- The direct brow lift
- Temporal lifting
- The classic endoscopic brow lift
- Indications for open brow lift
- An algorithm for brow lifting using neuromodulators
- Gliding brow lift, a completely new technique for brow rejuvenation

With so much new information being presented, time will be given to open panel discussion with the faculty. Patient selection, the difficult neck, avoiding complications, managing expectations and practical advice on starting a facial rejuvenation practice will be among the topics covered. These are interactive sessions and delegates are invited to suggest topics they would like to discuss when they register. As many topics as possible will be taken from this pool and addressed during the course.

WEEKEND INCLUDES

- Full programme from world leaders in their field
- Accommodation on Saturday - double room (upgrade to track view or executive room possible)
- Drinks reception on Saturday night
- Buffet 2 course lunch on both days
- 3 course evening meal
- Teas and coffees throughout the day
- Evening entertainment TBC
- Access to the spa
- Potential track day on site on Friday afternoon (extra cost)
- Access to the museum on Friday (extra cost)

COST £1,300
