Join us in the **Cayman Islands** for four days of cutting-edge education in managing diseases of the skin.

The **18th Annual Caribbean Dermatology Symposium**, being held **January 15-19, 2019**, at the Westin Grand Cayman is an educational program led by internationally-known faculty who will provide the latest updates in medical dermatology and the diagnosis and treatment of various dermatologic conditions.

Take the opportunity to network with our distinguished faculty and your peers as you learn about complicated and common problems seen in practice. You'll gain insight and knowledge that will be immediately useful in the care of your patients.

We look forward to seeing you on Grand Cayman Island in January.

Register by September 30 to save \$300.

LEARNING OBJECTIVES

At the conclusion of this live activity, participants should be better able to:

- Design a comprehensive, evidence-based therapeutic strategy for treating acne.
- Discuss the clinical relevance of emerging science concerning the pathophysiology of acne vulgaris.
- Describe therapeutic approaches to actinic keratosis that optimize efficacy in treating lesions while reducing risk for neoplastic complications.
- Apply treatment strategies for atopic dermatitis to achieve therapeutic goals based on the severity of disease.
- Identify the pathophysiological role of inflammatory mediators in atopic dermatitis and their potential as targets for treatment.
- Differentiate among potential causes of contact dermatitis and the treatment approaches required.
- Recognize the role of dermoscopy in diagnosis and management of various skin lesions.
- Distinguish malignant from nonmalignant suspicious neoplasms.
- Design a management plan for melanomas at all stages of development.
- Compare and contrast the safety and efficacy of onychomycosis treatments, including drug interactions and warnings regarding therapy in patients with comorbid disease or receiving other medications.
- Design personalized management strategies that identify and address the specific immunological derangements found in patients with various dermatological conditions.
- Discuss photoprotection with patients, including pediatric patients and their caregivers.
- Explain the pathophysiological mechanisms that underlie psoriasis and its comorbidities.
- Describe optimal strategies for applying current clinical guidelines in the diagnosis and management of psoriasis.
- Compare and contrast strategies for managing inflammatory skin disorders in children and adolescents vs those used in adults.
- Identify patients with psoriasis who may be appropriate candidates for biological therapy.
- Recognize the benefits of community-based preventive strategies aimed at reducing the incidence of skin disease, including cancer.
- Design a comprehensive strategy for the management of rosacea.
- Discuss techniques for managing keloids that offer the greatest benefit with minimal risk of scarring.
- Implement treatment for urticaria that reflects the severity of the disease and the response to therapy of individual patients.
