

Featuring Dr. Dennis P. Tarnow

Director of Implant Education at Columbia School of Dental Medicine

What we know, what we think we know, and what we don't know about Immediate Extraction Socket Management

Course Description:

Immediate placement of implants into extraction sockets is an exciting treatment alternative for our patients. However, there are many potential short and particularly long term risks which the practitioner must be fully aware of. This presentation will focus on the potential problems and benefits both clinically and biologically when the choice of immediate socket placement is made for single and multiple sites.

Learning objectives:

- Identify what type of healing takes place against the implant in immediate socket placement
- Know how to minimize recession with immediate provisionalization
- Know the proper crown contour for immediate provisionals
- Know if the gap distance really matters
- Know if primary closure should be attempted or should it be left open
- Know if membranes should be utilized
- Know what type of graft material if any should be utilized
- Identify what are the potential short & long term risks involved with immediate placement of implants

Biography:

Dennis P. Tarnow is currently Clinical Professor of Periodontology & Director of Implant Education at Columbia School of Dental Medicine. He is the former Professor & Chairman of the Department of Periodontology & Implant Dentistry at New York University College of Dentistry.
