

2025 International
**Sublobar Resections and
Bronchoscopic Ablation Summit**

January 9th & 10th, 2025

Paris, France

paris.international-conference-sublobar.com

Dear Colleagues,

We are pleased to invite you to our joined **5th International Sublobar Resection and Bronchoscopic Ablations Summit** that will take place on **January 9th & 10th, 2025 in Paris**.

Building on our success since 2018 in bringing together the surgical community to discuss sublobar development, we also aim to capitalize on the tremendous success of the first two congresses on bronchoscopic ablation, held in London (2022) and Hong Kong (2023).

Therefore, we will focus on **all aspects of sublobar resections for lung cancer, from indications to preoperative planning and advanced surgical techniques**. Additionally, we will present **the latest advancements in robotic bronchoscopy, advanced navigation, imaging, and ablation technologies** that could lead the way in the sublobar field in the near future! These various techniques will coexist and complement each other. That's why the Institut Mutualiste Montsouris and St. Barts Hospital are joining forces and pooling their experience for this new edition.

The focus of this event will be to assemble an even larger gathering of the world's brightest minds and leaders in sublobar resection and lung ablation, to share their experiences and discuss the advances made in recent years.

As a result, the conference will serve as an open door to an exciting and promising future.

Looking forward to welcoming you in Paris!
