A Practical Guide to Recognising & Responding to the

Deteriorating Patient

*Improving the reliability of patient observations
& ensuring quality of care to reduce failure to rescue
of acutely ill patients on the wards*

Wednesday 30 November 2016 Hallam Conference Centre, London

Chaired by Dr Chris Roseveare Consultant in Acute and General Medicine Lymington New Forest Hospital this one day conference focuses on recognising and responding to the deteriorating patient through improving the reliability of patient observations and ensuring quality of care to reduce failure to rescue of acutely ill patients. The conference opens with a National Update on developments and improving the effectiveness of the National Early Warning Score (NEWS). The conference will also focus on implementing the patient safety alert and toolkit on supporting safer care of deteriorating patients released in July 2016.

The conference continues with a practical case study based sessions on identifying patients at risk of deterioration, improving practice in patient observations, responding to the deteriorating patient, and improving the communication of NEWS at the interface of care. Extended sessions will focus on cardiac arrests as never events, and improving the response to sepsis.

“All hospitals should have a formal protocol for the early identification and immediate management of patients with sepsis... An early warning score, such as the National Early Warning Score (NEWS) should be used in both primary care and secondary care for patients where sepsis is suspected... On arrival in the emergency department a full set of vital signs, as stated in the Royal College of Emergency Medicine standards for sepsis and septic shock should be undertaken.” NCEPOD 2015

The conference will also feature a Pre Conference Supplier Showcase: Detecting the deteriorating patient through Electronic Vital Signs Monitoring and Advanced Warning Systems which will demonstrate the latest developments in technology to support the detection of the deteriorating patient .
