UCLA CONFLICT OF INTEREST DISCLOSURE

The FDA has issued a concept paper which classifies commercial support of scientific and educational programs as promotional unless it can be affirmed that the program is “truly independent” and free of commercial influence. In addition to independence, the FDA requires that non-promotional, commercially supported education be objective, balanced, and scientifically rigorous. The policy further states that all potential conflicts of interest of the CME staff and faculty be fully disclosed to the program’s participants. In addition, the Accreditation Council for Continuing Medical Education policy now mandates that the provider adequately manage all identified potential conflicts of interest prior to the program. We, at UCLA, fully endorse the letter and spirit of this concept.

The International Retinal Imaging Symposium IV will take place on Saturday March 19, 2016 at the Ronald Reagan Medical Center at UCLA and will feature a series of lectures that will focus on the latest developments in retinal imaging, including: fundus autofluorescence, spectral domain and swept source optical coherence tomography (OCT) and OCT angiography, and ultra-widefield imaging. This conference will include a full day of lectures by many of the world's experts in retinal imaging who will speak on recent innovations in retinal imaging that have occurred in this rapidly advancing field.

Our world-renowned faculty will aim to familiarize course participants with the newest evolving technologies and will guide and instruct our registrants in the application of these advanced systems and in the interpretation of novel imaging findings. This will help our participants better manage their patients with macular and retinal disease and achieve better patient outcomes in their practices.

We welcome your participation at IRIS which promises to provide insight and understanding in retinal imaging and showcase the integral importance of innovative retinal imaging in the evaluation and management of retinal disease.
