Cardiovascular Health and Disease
During and After Cancer Therapy

A CASE-BASED CURRICULUM

MAY 18-19, 2018

Memorial Sloan Kettering Cancer Center
Rockefeller Research Laboratories
430 East 67th Street
New York, NY 10065

2018 MSK CARDIO-ONCOLOGY SYMPOSIUM

Over the past decade, the cardiovascular care of patients with cancer has evolved as a subspecialty driven by novel therapies that can cure or control patients, allowing many patients to be living long enough to experience the potential cardiotoxic effects of these treatments. The purpose of this conference is to provide a case-based curriculum that addresses important clinical topics relevant to the cardiovascular health of patients with cancer. Clinical experts from Memorial Sloan Kettering Cancer Center and around the country will present an up-to-date overview on the best practice strategies in the evaluation and management of heart disease in cancer patients from early diagnosis, treatment and long-term surveillance. All presentations will include devoted time to permit interaction between audience members and presenters. There will be a separate computer-based session on how to perform and analyze global longitudinal strain.

Computer Based Hands-On Learning Lab (Optional)

How to Perform and Analyze Global Longitudinal Strain (GLS) - Tips and Tricks

There will be a separate (optional) hands-on, computer based session on how to perform and analyze global longitudinal strain. Space is limited for the Learning Lab - we strongly encourage **early registration** in order to secure your spot.
