

6th ASM Conference on Beneficial Microbes

September 9–12, 2016 | Seattle, Washington

Share your research findings.

The 2016 Beneficial Microbes Conference will offer a unique forum for the exchange of the latest conceptual and technological developments in the fast-moving field of beneficial host-microbe interactions. It will provide an overview of the current state of research and future directions of inquiry, achieved by bringing together US and international researchers from multiple disciplines (microbiology, immunology, developmental biology, genomics, nutrition, ecology, systems biology, evolutionary biology and clinical science) who study a diversity of host-microbe associations.

What past attendees are saying:

"The diversity of the speakers allowed every niche of the beneficial microbes community to be represented."

"In general, the speakers were consistently good, more so than in other microbe meetings I've been to. They were eloquent, interesting, and stuck to time. Lovely to see such a wide range of career-stages."

"Impressive combination of results and presentation and skill."
