CLINICAL APPLICATION OF CAR T CELLS

Chimeric antigen receptor (CAR) T-cell ('Living Drug') immunotherapy is showing promising results in the treatment of cancers. Over the years, MSK has accumulated a breadth of knowledge about developing and translating these clinical trials from bench to bedside. MSK faculty, along with national and international experts, will discuss the **clinical and translational aspects of cell therapy (CARs, TCRs, NKs), both for hematologic malignancies and solid tumors.**

MAIN SESSIONS TOPICS

- Building your own CAR T-cell program
- Mechanisms of Relapse in CD19 CAR T-cell therapies
- Beyond CD19 for hematological malignancies
- Solid tumor cell therapy clinical trials
- Novel gene engineering in cell therapies
- National guidelines for adoptive cell therapy
- Toxicity management in clinic
- Manufacturing processes for cell engineering
- Off-the shelf cell therapies
- Navigating the IP and licensing landscape

BREAKOUT SESSIONS TOPICS

- Operational infrastructure of commercial cell therapies
- Novel assays for cell therapy monitoring
- Vectors and tools for gene engineering
- Meet the experts session
- Roundtable Discussion Forums
- ABC of Cell Therapy for paramedical staff

The **target audience** includes medical oncologists and oncology fellows in training, basic scientists, research fellows in training, nurses, clinical trial research staff, immunologists, and surgeons with an interest in tumor immunology and immunotherapy.

CALL FOR ABSTRACTS

Participants are invited to submit an abstract for presentation at the course. Abstracts for the poster session will be selected on the basis of scientific merit and content quality. Submission deadline: January 21, 2019. International presenters will be notified by January 2, 2019 to assist with making travel arrangements.
