1st Announcement

EXA/DE/0914

WELCOMING ADDRESS

Dear colleagues and friends,

It is our great pleasure to cordially invite you to the 64th Annual Meeting of the Society of Thrombosis and Haemostasis Research (GTH e. V.). The meeting will take place in Bremen, 18–21 February 2020, in the centrally located Congress and Exhibition Center.

Our congress motto “Novel concepts for a lifetime challenge” points out that many disorders in the field of thrombosis and haemostasis affect patients throughout their entire life. Thus, basic science and patient care should involve both, an interdisciplinary approach at a patient’s given age and a close collaboration of physicians and scientists specialized on different phases of the patient’s life, such as neonatologists, paediatricians, general practitioners and geriatricians. Understanding the natural history of bleeding and thrombotic disorders from a clinical and scientific perspective is key to providing our patients with the best possible treatment in a rapidly changing landscape of novel diagnostic tests and therapeutic agents.

The Free Hanseatic City of Bremen is easily accessible and offers optimal conditions for a stimulating meeting in a historic environment. We feel that the Town Musicians of Bremen, as depicted in the annual meeting’s logo, nicely illustrate the urgent need for trustful teamwork in basic science and clinical practice. Only when we build on each other’s knowledge and experience, we can come up with “Novel concepts for a lifetime challenge”.

We therefore strongly encourage you to come to Bremen and share your latest work with the scientific community. The Free Hanseatic City of Bremen and both of us welcome you, including students, nurses, technicians and physiotherapists, and all other friends of thrombosis and haemostasis in February 2020.

Florian Langer
Congress President

Thomas Renné
Congress President

PROGRAMME

Main Topics

- Future anticoagulants
- Perinatal and paediatric haemostasis
- Treatment in the elderly
- Haemostasis in the ICU
- Inherited and acquired bleeding disorders
- Precision medicine
- Laboratory diagnostics
- Genetics and epigenetics
- Coagulation and cancer
- Platelet biology
- Vascular inflammation
- Innate and adaptive immunity
- Economic and legal aspects

REASONS TO ATTEND GTH 2020

1. Latest knowledge

Get the latest knowledge in the field of haemostasis and thrombosis to bridge the gap between preclinical and clinical research and the daily treatment of patients.

2. Thought leaders

Engage with thought leaders in the most talked-about areas of haemostasis and thrombosis.

3. Valuable insights

Gain valuable insights from interactive and practical sessions and case studies.

4. Challenges ahead

Prepare for the advances in haemostasis and thrombosis and the challenges ahead.

5. New developments

Learn about new developments of innovative treatment options from around the world.

6. Worthwhile interactions

Spend 4 days in interactions that are really worth your time.
