

Presents

International Summit on Diabetic Foot Bangalore

Supported by

Indian Podiatry Association

Themed

'Salvaging the Lower Limb in Diabetes'

Venue: FootSecure, First Floor, RxDx, Plot No. 7G, Opp. Graphite India, Whitefield, Bengaluru, Karnataka 560048

Date: Sunday, 19th May 2019

Time: 9:00am – 5:00pm

Welcome Message

Dear Colleagues,

FootSecure - India's first podiatry chain, will be organizing its maiden summit on Diabetic Foot, along with Indian Podiatry Association on 19th May 2019, at its flagship centre in Whitefield.

Future-focused content with an emphasis on the salvaging the lower limbs in your everyday practice; ISDF Bangalore will provide a rigorous overview on the present trends and practices in managing the diabetic foot and its associated conditions. The sessions are led by experts from US, UK and India.

The program is designed for multidisciplinary specialties: General Practitioners, Diabetologists, Podiatrists, Nurses, Physiotherapists, Orthotists, Endocrinologists, Vascular surgeons, Orthopaedics, infectious diseases and other specialties caring for people with diabetic foot disease.

The program not only focuses on the bigger picture with latest research, clinical practice and technology from around the globe, but also how this fits with your own local practice.

Regards,

Dr Sanjay Sharma

Founder - FootSecure

About International Summit on Diabetic Foot, Bangalore

Diabetic Foot is one of the most serious complications of Diabetes in India, and has a huge socioeconomic impact on the patients and their care givers, particularly if foot or limb amputation is performed.

Clearly, managing the diabetic foot is a multidisciplinary effort by experts such as podiatrists, orthopaedists, vascular and plastic surgeons, dermatologists, neurologists, endocrinologists, diabetes specialists, physical therapists, nutritionists, nurses, footwear and orthotic consultants and industry research & development leaders.

Biomedical research in gait and motion science, tissue mechanics, microbiology, sensor technology, image processing and big data are making a huge difference in managing the epidemic.

This summit in Bangalore, will provide a platform for multidisciplinary top-tier scientific and clinical discussions regarding the management and salvage of the lower limb, and will address technological innovation in the field.
