ACTIVITY INFORMATION

COURSE DESCRIPTION AND STATEMENT OF NEED

Cardiovascular disease (CVD) was once thought of as primarily affecting men, but today, CVD is the number one killer of women in the US, claiming almost 400,000 American women every year. Furthermore, as the average age of the American woman increases, the morbidity and mortality rates of CVD are likely to increase dramatically. Yet, many women at risk for coronary heart disease are often not referred for appropriate diagnostic testing, perhaps because until recently, it was thought that the clinical manifestations of women with cardiovascular disease were essentially similar to those of men and warranted similar management. This means the disease process resulting in a heart attack or stroke may not be detected in women until later, with more serious consequences.

Despite significant advances in our knowledge about preventive interventions, cardiovascular disease remains the leading killer of women in the United States. In an effort to further educate in this area our planning committee has assembled a distinguished faculty of national speakers, each with a unique expertise in the field of cardiovascular health and heart disease.

This in depth educational symposium will explore gender specific issues in coronary microvascular dysfunction, heart failure, screening for CVD, weight management strategies, hormone therapy, plant based eating, statin intolerance and new lipid lowering therapy, and new information on the risks and benefits of aggressive blood pressure management. The purpose of this conference is to close the knowledge gap of physicians and allied health care professionals regarding sex-specific differences in cardiovascular disease, the impact these differences have on treatment options, and to highlight the importance of identifying women at risk for cardiovascular disease by utilizing the most current evidence-based treatment strategies for improved patient outcomes.

TARGET AUDIENCE

This educational activity will be designed to address the educational needs of physicians, surgeons, and healthcare professionals caring for women patients with heart disease.

EDUCATIONAL OBJECTIVES

- Describe how clinical manifestations of cardiovascular disease vary in women
- Recognize risk factors and the role genes, hormones and life circumstances play in CVD
- Focus clinical practice approach on the unique aspects of cardiovascular care for women to provide necessary resources for prevention, diagnosis and treatment of CVD in women
- Understand the risks and benefits to screening for CVD in women
- Review results of the latest clinical trials to understand the benefits of CRT and ICD therapies in patients with heart failure and reduced ejection fraction
- Review and understand approaches to weight management, hormone therapy, and supplements
- See case examples of plant-based eating, preventive screening, tobacco and depression interventions
- Identify statin intolerance and recognize the risks and benefits of PCSK9 inhibitors
- Review results of SPRINT Trial specific to women in order to understand and examine clinical implications for management of hypertension in female and in the elderly
