Join us at Skin Disease Education Foundation's (SDEF) 18th Annual Las Vegas Dermatology Seminar®, November 2-4, 2017. Nationally known leaders in the field of dermatology will present recent advances and emerging trends in the diagnosis, treatment, and monitoring of patients with skin diseases. This highly scientific three-day CME/CE conference features key clinical topics such as acne, rosacea, AK, contact dermatitis, psoriasis, atopic dermatitis, onychomycosis and other fungal infections, infectious diseases in dermatology, fillers, toxins, devices, cases and more.

SDEF's Psoriasis Forum is now in its 14th year. This in-depth, comprehensive program is featured on day two. Clinical presentations, interactive panels and cases covering current and emerging therapies for the treatment of psoriasis are covered throughout the day.

SDEF's 18th Annual Las Vegas Dermatology Seminar® including the 14th Annual Psoriasis Forum will be of interest to both the seasoned clinician and residents. Please join us November 2-4, 2017, at Caesars Palace in Las Vegas for a rewarding educational experience. The format is informal and relaxed, encourages a free-flowing exchange of ideas between our expert faculty and colleagues as well as providing practical solutions that are immediately useful in improving patient outcomes.

THIS CONFERENCE IS FOR YOU

Dermatologists • Dermatology Residents • Family Physicians • Internists • Nurse Practitioners • Physician Assistants • Nurses • Pharmacists

LEARNING OBJECTIVES

At the conclusion of this live conference, participants should be better able to:

- Integrate into daily practice evidence-based recommendations on new and emerging therapies for common and uncommon dermatologic diseases.
- Assess the risks and benefits of currently available options for acne.
- Develop optimal treatment strategies for acne that include patient counseling to set expectations and to improve adherence.
- Recognize early signs and symptoms of actinic keratoses and seborrheic keratosis, and other nonmelanoma skin cancers.
- Recognize dermatologic conditions that should be considered in differential diagnosis of a patient with signs and symptoms of rosacea.
- Describe factors, including vehicle formulation, that may affect the efficacy and tolerability of, and patient satisfaction with, agents used in management of rosacea.
- Develop a strategy for the optimal management of atopic dermatitis, including rotational regimen.
- Describe the rationales and mechanisms of action of the new and emerging therapies for atopic dermatitis, particularly the recently approved and emerging agents.
- Establish or improve practice protocols for identifying patients with onychomycosis, and develop treatment plans using current and emerging therapeutic options.
- Explain the roles of currently available biologic agents in the treatment of psoriasis and appropriately incorporate newer biologics and novel pathways into practice as these become available.
- Interpret and evaluate emerging clinical trial data related to the mechanisms of action, efficacy, and safety of currently available and newly emerging biologics and other agents used to treat psoriasis.
- Formulate a management plan, based on existing guidelines and emerging evidence, that incorporates updated recommendations for patients with psoriasis using topical and/or systemic therapies.
- Assess patients for comorbidities and manage psoriasis as well as the associated comorbidities.
- Diagnose and manage dermatologic symptoms resulting from infectious diseases.
- Summarize the current evidence supporting the use of vaccines from dermatologic conditions.
- Describe the intrinsic and extrinsic factors that contribute to underlying changes in facial anatomy.
- Recognize the factors that are important in selecting appropriate filler and toxin agents for treating different areas of the face and targeted planar depths.
- Compare and contrast the efficacy and safety of agents, devices and techniques currently available in aesthetic and procedural dermatology.
