Masters' Approach to Critical Limb Ischemia (MAC) Webcast Series

Case-based discussion: Putting It All Together

Release Date: August 9, 2016**Expiration Date:** August 9, 2017**Estimated Time of Completion:** 45 minutes

Description

[**Masters' Approach to Critical Limb Ischemia \(MAC\)**](#) is a webcast series that provides clinicians with a comprehensive review of epidemiology, pathology, diagnosis, and treatment of critical limb ischemia (CLI), peripheral artery disease (PAD), and wound care from a multidisciplinary perspective.

This series updates health care practitioners regarding the biologic basis of vascularization, assessment and classification of wounds, and current therapeutic approaches to revascularization. Through a knowledgeable approach to treating this patient population, practitioners will be able to incorporate the latest research and clinical trial findings into their practice and, thus, enhance their ability to create management strategies and improve the care of their patients.

This webcast will feature a case-based discussion on endovascular limb salvage, atherectomy in the management of CLI, retrograde pedal access as a primary approach in infrapopliteal CLI, and ipsilateral retrograde access stenting of a chronic total occlusion of superficial femoral artery.

Learning Objectives

Target Audience

Physicians, nurses, physician assistants, and health care professionals in vascular surgery, podiatry,

Accreditation

The Cleveland Clinic Foundation Center for Continuing Education is accredited by the Accreditation

Activity Directors and Faculty

CME Disclaimer
