# YOU'LL WANT TO BE AT THIS SUMMIT

---

This **Gastrointestinal Hemorrhage Summit** is designed to improve management of patient care, promote collaboration, and accelerate the decision-making between providers and patients. The goal is to decrease the time between diagnosis and treatment and ensure appropriate referral patterns, thus creating a more positive patient outcome.

Gastrointestinal (GI) hemorrhage is a common and serious medical problem resulting in significant morbidity and mortality in patient populations from all medical disciplines. Its etiology is diverse and presentations can range from chronic and undetectable to acute and life threatening. Diagnosis and proper management of GI hemorrhage can be challenging, particularly with acute attacks. Furthermore, GI hemorrhage can lead to significant health care cost burdens on the health system. Thus, educational initiatives that improve outcomes from GI hemorrhage can have a significant effect on this patient population.

## WHO WILL ATTEND?

---

This summit is designed for physicians and other providers involved in diagnosis and treatment of gastrointestinal hemorrhage.

## STAY CURRENT WITH THESE OBJECTIVES

---

- Describe the efficacy, safety, and potential roles of new approaches and therapeutic modalities to both the diagnosis and management of patients with acute chronic GI hemorrhages
- Discuss the management of unusual clinical scenarios such as GI hemorrhage in pediatric patients and patients with multiple comorbidities, including patients in intensive care units
- Discuss the importance of the multidisciplinary approach to patient care
