About the Course

Kidney stones present a complex challenge and unique opportunity to the health care provider. It offers the chance to intervene at a time of crisis and alleviate pain and suffering. At the same time, it opens the door to a long-term relationship aimed at engaging the patient in the prevention of future stone recurrence. This course will highlight advances in instrumentation and technique in endourologic procedures for stone disease. Participants will have the opportunity to develop and refine their skills in a hands-on simulation session. The course will also provide a critical assessment of laboratory evaluation and imaging utilization in kidney stone management. Lastly, it will place a strong focus on the dietary and pharmacological approaches to stone prevention.

Target Audience

Urologists, nephrologists, dietitians, physician assistants and nurse practitioners with an interest in developing their knowledge and skills in the management of kidney stone disease.

Objectives

After completing participation in this activity, the participant will be able to:

- Identify preoperative criteria for patient selection for shockwave lithotripsy.
- Identify strategies to improve efficacy of shockwave lithotripsy.
- Identify innovations in instrumentation and technique for endoscopic stone surgery.
- Identify effective strategies for stone prevention using patient-centered dietary and pharmacological approaches.
- Develop hands-on skills for manipulation of the ureteroscope and nephroscope.
- Discuss patient selection and surgical technique for endoscopic management of transitional cell cancer.
- Identify the role of autotransplant and laparoscopy in the management of patients with stone disease.
- Identify strategies to minimize radiation exposure during endourologic procedures and during CT imaging for stone disease.
