Periodontal and Implant Decision Making: From Treating the Ailing Tooth to the Failing Implant

In-Person or Live Webinar

Herman Ostrow School of Dentistry of USC
Friday, June 1, 2018
9:00 am - 5:00 pm

★ Life-Long Tradition and Excellence ★

Speakers

Alon Frydman, DDS

Dr. Frydman is an Associate Professor of Clinical Dentistry in the Division of Periodontology and the Division of Restorative Sciences at the Herman Ostrow School of Dentistry of USC. Dr. Frydman received his dental degree from UCLA and graduated from the Advanced

Periodontology Program at USC, where he has since been a faculty member. Dr. Frydman teaches courses in treatment planning and implant therapy and lectures nationally on topics related to aggressive periodontitis and implant disease. He is a Diplomate of the American Board of Periodontology as well as an Examiner for the American Board of Periodontology. Dr. Frydman's research focuses on implant therapy and periodontal disease.

Krikor Simonian, DDS

Dr. Simonian is a graduate of the Herman Ostrow School of Dentistry of USC. He practiced as a general dentist for 11 years, and in the meantime held a faculty position at USC. He obtained his specialty certificate in 2004 upon completion of the 3 year program in Advanced Periodontology

at USC, and his board certification by the American Board of Periodontology in 2005. He is a Clinical Assistant Professor at the Herman Ostrow School of Dentistry of USC Advanced Periodontology Program and has lectured nationally. He has published in several leading peer-reviewed journals, including Journal of Periodontology, International Journal of Oral & Maxillofacial Implants, Journal of the California Dental Association, Clinical Implant Dentistry and Related Research, Clinical Advances in Periodontics and the Journal of the Western Society of Periodontology. Dr. Simonian is an active member of the American Board of Periodontology, American Academy of Periodontology, American Dental Association, California Dental Association and the San Gabriel Valley Dental Society.

All speakers must disclose to the audience any proprietary, financial or other personal interest of any nature or kind, in any product, service, source and/or company, or in any firm beneficially associated therewith that will be discussed or considered during their presentation. The Herman Ostrow School of Dentistry of USC does not view the existence of these interests or uses as implying bias or decreasing the value to participants. The Herman Ostrow School of Dentistry of USC, along with ADA CERP, feels that this disclosure is important for the participants to form their own judgment about each presentation.

Synopsis

Understanding implant treatment planning requires both restorative and surgical perspectives. Further complicating implant dentistry are the challenges in treating the ailing implant. Surgically, implants are an obvious choice for edentulous areas, however challenges arise when replacement of questionable teeth with implants are contemplated. Periodontal literature provides insights when maintaining the dentition is possible. However, there are situations where the decision to replace teeth with implants is not very clear. The aim of the course is to explore the multiple facets of implant dentistry including the treatment of ailing implants in order to achieve a broad perspective that will be valuable to surgical and periodontal decision making. Topics will include origins and science behind osseointegration, current trends in peri-implantitis therapy a basic review of surgical procedures typically used for augmentation and implant site preparation, implant success and failure, an understanding of periodontal prognosis of teeth in relation to implant prognosis, and surgical treatment planning of implants. The goal is to combine a broad understanding of the current science behind implants and the treatment of their complications in order to develop a more concise treatment plan that helps navigate the difficult question of when to replace natural teeth with implants, or even when to replace ailing implants.

This course is designed for dentists, periodontists, oral surgeons, prosthodontists, hygienists, dental assistants and all members of the dental team.

Please be cautioned about the potential risks of using limited knowledge when integrating new techniques into your practices.

ADA CERP® | Continuing Education
Recognition Program

Association for
Continuing Dental Education

University of Southern California Herman Ostrow School of Dentistry is an ADA CERP Recognized Provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry.

Topics to be covered:

- Emerging therapies for treating peri-implantitis
- Prevention of peri-implant disease
- Alternatives to titanium implants
- Periodontal diseases and their potential impact on implant prognosis
- Tooth prognosis versus implant prognosis
- Implants as foreign bodies
- Peri-implant disease
- Peri-implantitis in comparison to periodontitis lesions
- Prognostic evaluation of teeth in treatment planning for implants
- Prognosis of traditional therapy versus implant treatment

Upon completion of the course participants should know:

- Current theories behind peri-implantitis
- Emerging modalities for treatment of peri-implant disease
- Principles of osseointegration
- Principles of implant site preparation and augmentation
- Differences between treatment planning implants for sites with and without teeth
- How to assign a concise prognosis for involved teeth
- How to select teeth for strategic extraction
- Indications and contraindications for placing dental implants in periodontally compromised cases
