16th EADO CONGRESS WELCOME MESSAGE

Dear Colleagues,

Due to the Coronavirus crisis the scientific committee, congress presidents and the congress organization decided to organize the **16th EADO Congress as an interactive virtual meeting on October 12th – 14th 2020 CENTRAL EUROPEAN TIME (CET)**.

Although Lithuania is managing COVID-19 situation quite well, there is a level on uncertainty in Europe with the travel situation. Even thereafter it is unclear that meetings like this can happen in Europe.

The virtual EADO Congress will host an own congress platform with interactive features, a plenary hall, a virtual industrial exhibition, poster exhibition, etc. The sessions will take place live, with virtual presence of the chairperson and the speakers, questions will be possible through a Q&A sessions. The EADO Executive board members will be available onsite to support symposiums and facilitate effective discussions.

As a registered participant you will have access to the on-demand service. You will have the opportunity to discuss live with the chairs and faculty members, or you can follow the sessions and view the presentations afterwards until the end of the year.

With your support we will make this meeting at the highest scientific level.

We look forward to welcoming you ONLINE in October 2020

Proposed dual mode of action of intratumourally injected T-VEC* in melanoma

As an oncolytic immunotherapy, T-VEC causes the death of tumour cells and a release of tumour-derived antigens¹

It is thought that, together with GM-CSF, tumour-derived antigens will promote a systemic anti-tumour immune response and an effector T cell response¹

There is a potential to turn ‘cold’ tumours into ‘hot’ with T-VEC^{3–5}

▼ This medicinal product is subject to additional monitoring. This will allow quick identification of new safety information. Healthcare professionals are asked to report any suspected adverse reactions. See section 4.8 of the SmPC for information on the reporting of suspected adverse reactions.⁶

Summary of Product Characteristics (SmPC) available on request.

Talimogene laherparepvec (T-VEC) is indicated for the treatment of adults with unresectable melanoma that is regionally or distantly metastatic (Stage IIIB, IIIC and IV M1a) with no bone, brain, lung or other visceral disease.¹

GM-CSF: granulocyte macrophage colony-stimulating factor; HSV-1: herpes simplex virus type-1.
