Real World Endo® *presents*

Long Term Success Using Modern Material Science

Lynne A. Brock, DDS, CAGS, FACD

For over 20 years, Dr. Brock practiced Endodontics full-time in the Milwaukee area and is currently practicing part-time in Madison, WI. She is an Associate Professor in Endodontics at Marquette University School of Dentistry in Milwaukee. Dr. Brock is an RWE Board Advisor and certified lecturer. President of Smile for a Lifetime Foundation SE WI; Past President of Greater Milwaukee Dental Association; Delegate for Wisconsin Dental Association; and owner of Brock Endodontics.

Description: (Lecture)

Restorative Endodontics (RE) is based on minimally invasive root canal preparations and bioceramic bonded obturation that enhance the long term biomechanical success of the endodontically treated tooth. It (RE) is based on a biologic approach that emphasizes debridement and disinfection rather than shaping for obturation. This Real World Endo presentation is highly practical and will describe numerous facets of clinical endodontics. The principal scientific concepts for successful endodontics will be presented as well as new technology and techniques that emphasize responsible shaping and HA (hydroxyapatite) bonding inside the root canal. A new instrumentation and obturation system (ESX®) will be introduced. Real World Endo remains dedicated to the preservation of the natural dentition through smarter more thoughtful endodontics. This lecture is a must see for those practitioners committed to clinical efficiency without sacrificing quality care for their patients.

During this lecture participants will learn:

1. The scientific concepts for success by incorporating a few new simple steps during clinical care.
2. How to responsibly shape the root canal through the instrumentation system.
3. The use of the new bioceramic materials in both endodontic and pediatric care.
4. Understand how to properly use the ESX® NiTi rotary file and instrumentation system.
5. All attendees will completely understand the term, “Hydraulic Condensation” and its application during obturation.
