ADHD is a disorder of impaired executive function. Executive functions develop in a sequence including the acquisition of working memory, the ability to develop focus, control emotions, impulses, and to set and attain goals.

When best practices are applied by the family, educator and health professional, ADHD is one of the most treatable neuropsychiatric disorders.

- Participants completing this program should be able to:*
- 1. Describe varied symptoms, subtypes and comorbidities associated with ADHD and executive functions.*
 - 2. Describe the major medical and health concerns associated with ADHD.*
 - 3. Compare and contrast the various evidence-based treatment modalities including medication, nutrition, education, academic, and cognitive and behavioral interventions.*
 - 4. Discuss practical and effective methods for treating the most common comorbidities of ADHD and Oppositional Defiant Disorder.*
