CERTIFICATE COURSE

NDTA™ Certificate Course in the Contemporary Practice of NDT for the Management of Children with Cerebral Palsy and Other Neuromuscular Disorders

Course ID: #23P101
Level: Intermediate
Focus: Pediatric
CE Hours: 261.0
Target Audience: OT, PT, SLP

DESCRIPTION

NDTA™ Certificate courses are postgraduate continuing education courses offered to Physical Therapists, Occupational Therapists, and Speech-Language Pathologists who work with adults or children with movement disorders associated with neuromuscular impairments. The Certificate Course core curriculum includes didactic information, hand-on lab work in which participants practice problem solving and application of intervention strategies, treatment demonstrations by instructors, and mentored clinical practice in which participants work with a variety of clients. Instruction in the Contemporary Practice of NDT as an interdisciplinary team approach assures that all therapists learn to address each client using a holistic approach. All therapists, regardless of discipline, cover the same course material. Throughout the course, they assess and treat clients with neuromuscular disorders to gain a thorough understand of each individual's underlying posture and movement impairments and function.

LEARNING OUTCOMES

For detailed learning outcomes please go to NDTA.org/certificate and click on "Key to the OT Course Content".

COURSE OBJECTIVES

Upon completion of this course the participants will be able to:

- Observe, analyze, and synthesize effective and ineffective components of posture and movement.
- Identify the relationships between function, posture and movement components, and systems integrities and impairments in individuals with neuromuscular disorders.
- Demonstrate effective NDT clinical reasoning and problem solving, using assessment findings to develop realistic treatment plans.
- Develop and implement therapeutic handling strategies that result in changes in the client including: improved sensorimotor performance, achievement of functional goals, and enhanced participation in meaningful activities.
- Problem solve multi-system, and single system impairments as it relates to sensory-motor processing, upper extremity function and visual motor function and chose effective NDT strategies to address identified functional limitations.
- Understand and explain the importance of interdisciplinary team approach including interaction with other disciplines, utilization of adaptive equipment, and education/training of caregivers in the home and community.

DISCLOSURE

Financial: The Course Instructors, Debbie Evans-Rogers, PT, PhD., C/NDT, Kimberly Westhoff, OTR/L, C/NDT, and Carmen Pagan, MA, CCC-SLP, C/NDT are compensated for instruction of this course.
