A Continuing Nursing Education Activity
Sponsored By

Pfiedler
ENTERPRISES

Overview

This course will provide an overview of the risks associated with blood transfusions and rationale for minimizing the use of transfusions. The focus will be on hemostatic agents and sealants to reduce patient bleeding during surgery. It is critical that nurses understand the uses and application of topical agents in order to use them appropriately. The presentations will cover blood conservation, the use and application of hemostatic agents and sealants. Each participant will be given the opportunity for open discussion and simulated questions to emphasize the appropriate use.

Objectives

Upon completing this educational activity, the participant should be able to:

1. Discuss the rationale and need for blood conservation during surgical procedures.
2. Explain options for blood conservation.
3. Differentiate the classes of topical surgical hemostats, sealants and adhesives, including their composition, mechanism of action and the clinical differences that exist between products.
4. Describe indications, contraindications, appropriate selection and correct application techniques in ensure safe and efficacious use.

Target Audience

This course is for perioperative nurses and other healthcare professionals who are involved with surgical procedures that require blood conservation and the use of hemostatic agents and sealants.
