NARUS2019

At this year's NARUS meeting we have a new format for the agenda. Rather than disease-specific, we are going with surgical concepts across multiple disease sites and building the knowledge from setup steps to key steps to troubleshooting to reoperative situations. We will weave in live surgery and keynote speakers from robotics, oncology, pediatrics, allied health and reconstruction. We will finish with awards for best posters.

LEARNING OBJECTIVES

ADULT

TOPIC AREA: PROSTATE

1. To review anatomical steps of robotic prostatectomy and difficult anatomic scenarios
2. To demonstrate refined techniques for preserving urinary control after robot-assisted radical prostatectomy, and link them to patient reported outcomes
3. To demonstrate nerve preserving surgical plane selection and recognition including difficult anatomy

TOPIC AREA: RENAL

1. To demonstrate the surgical steps of robotic surgery procedures for kidney cancer
2. Analyze the robotic techniques unique to the surgical management of kidney cancer
3. Describe tips and tricks to manage difficult intra-operative situations and avoid complications
4. Discuss the key complications and outline the intra-operative and post-operative management related to robotic surgery procedures

ALLIED HEALTHCARE

1. Provide a unique opportunity for the peri-operative nurses and allied health professionals working in robotics to learn strategies for successful robotic surgery across multiple specialties from the pre-, intra-, and post-operative perspectives
2. Collaborate with or without their surgeon counterparts
3. Discuss and experience hands-on workshops that cover areas such as optimizing efficiency, team management, and assist strategies
